

Using what you know

The calculations on the left have all been done for you.

If you look at them carefully, you will see that they can help you do the calculations on the right.

Here is one example

$$6 \times 10 = 60 \quad \text{so} \quad 6 \times 20 = 120 \quad (\text{just double the answer on the left})$$

Now do these.

$$7 \times 10 = 70 \quad \text{so} \quad 7 \times 5 = \quad (\text{just halve the answer on the left})$$

$$3 \times 8 = 24 \quad \text{so} \quad 6 \times 8 =$$

$$4 \times 4 = 16 \quad \text{so} \quad 4 \times 8 =$$

$$5 \times 4 = 20 \quad \text{so} \quad 5 \times 40 =$$

$$7 \times 10 = 70 \quad \text{so} \quad 7 \times 11 =$$

$$2 \times 10 = 20 \quad \text{so} \quad 2 \times 20 =$$

$$9 \times 10 = 90 \quad \text{so} \quad 9 \times 5 =$$

$$6 \times 3 = 18 \quad \text{so} \quad 6 \times 6 =$$
