

- two 1–6 dice

Adding four numbers for 2 players

First of all

Decide who plays up and down and who plays sideways.

When it's your turn

Roll the dice and multiply the numbers.

Write that answer in one of the squares on the grid.

The end of the game

Keep playing until the grid is full.

Up-and-down Player, choose a column of numbers and add them up.

Sideways Player, choose a row of numbers and add them up.

Who has the higher total? They win.

Sample game

The Sideways Player chose this row →

The Up-and-down Player chose this column ↘

72 is more than 67, so the Sideways Player won the game.

24	6	36	6
2	9	1	6
4	10	12	25
30	2	18	10
