

Total 100 for 2 players

20	40	40
25	75	30
55	15	30

Aim

Your aim is to make lines of two or three numbers that total 100.

First of all

Put the counters in a pile.

When it's your turn

Take a counter and put it in a box on the grid. If you complete a line of two or three numbers that total 100 take those counters off and keep them.

The end of the game

Keep taking turns until the counters are all used up.

Whoever has won most counters wins the game.

Sample game

The next player could put a counter on 25 and win two counters.

$$(75 + 25 = 100)$$

Or they could put it on 20 and win three counters.

$$(20 + 40 + 40 = 100)$$

20	40	40
25	75	30
55	15	30
