

# Hexagon ... and others

Cut out these triangles carefully.

Rearrange some or all of them (edge to edge)  
to make the shapes listed below and then sketch them.

1. A larger triangle
2. Three different quadrilaterals
3. A five-sided shape (pentagon)
4. A six-sided shape (hexagon)
5. The shape with the maximum possible number of sides

Now make some other shapes with the pieces.

Sketch each shape and name it.
