

- number cards 1-12
- 24 small cubes in three colours

# Subtractions

## First of all

Spread the cards out on the table, face down, and shuffle them around.

Put a cube on each number on the number track.

## When it's your turn

Take two number cards.

Subtract the smaller number from the larger number and say the answer.

Take the cube from that answer on the track. If the cubes on that number are gone, you miss that go.

Put the number cards back, and shuffle them all around.

## The rest of the game

Go on until one player has collected four cubes in the same colour.

They win.
