

Facts to 20

You will need: 4–9 dice and 10 counters

How to play:

Roll the dice and place beside a number on the 7–11 number strip...make a choice?

Then add or subtract the dice number from your chosen number on the number strip.

For example: Roll a 5 so you could choose number 7. So $7 + 5 = 12$ or $7 - 5 = 2$.

Take turns with your partner to roll the dice and decide which number you will cover.

Game finishes when all your ten counters are on the game board.

Variation: Play against your partner with 8 counters each and winner is first to place all 8 counters on the game board.

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20
