Jungle Safari

Counter for each player and a dice (1, 2, 3, 4, 5, 10)

1. All players start on 15
2. Roll the dice and divide the number your counter is on. If there is a remainder, move your counter forward the same number of spaces as the remainder. 15 ÷ 4 = 3 r3 so move counter 3 spaces.
3. If there is no remainder, your counter does not move.
4. To finish, a player must move the exact number of spaces left.
5. The first player to the finish is the winner.
